Making Your Own Designer Grade Perfume

Mixing Formula:

- Up to 15% **Premium Blend** fragrances or Body Safe Essential Oil Blends
- Up to 85% **Perfume Base**

Example based on 150ml solution

- $150 \times 15\% = 22.5\text{ml}$ Fragrance
- $150 \times 85\% = 127.5\text{ml}$ Perfumer Base.

Testing – It's important to test different ratios because of the wide range of fragrances in the market place. We use an ethanol base so sometimes a very light fragrance may not be suitable due to the alcohol smell. Experimentation is the key.

Perfume Base

This perfume base is made with the highest quality of cosmetic grade ethanol, distilled water, <1% glycerine and <1% antioxidant. Glycerine is a humectant and helps the skin retain moisture. And as most of us know antioxidants assist with fighting free radicals to reduce the aging process.

The base has been formulated to remain a clear solution and will not go cloudy or milky. Please be mindful that if you use a yellow colour fragrance it will make your base yellow.

Perfume Grade Fragrances: *Premium Blends*

Glassware Imports has developed fragrances specially formulated for the application of Perfume. The fragrances are made with the finest quality perfumery ingredients, which makes them long lasting and stronger than most.

It's also important to mention that these specially formulated fragrances can also be used in the application of **Candle Making, Diffusers, Soap** and **Room Sprays** etc. They are a lot stronger than most standard candle fragrances, which mean you can use less for the same effect. The strength is designed for *6% to 8% dosage in Candles but you can use 10% if you wish.*

Premium Blend Fragrances

Click here to view a full list of our fragrances [Click Here](#)

<https://glasswareimports.com.au/shop/candle-making-supplies/fragrance-oils/>

Fragrances listed as **Premium Blend** are suitable for perfume application. You will see list of designer grade fragrances we have some replicated like; Elie Saab, Jimmy Choo, Jo Malone, Tom Ford to name a few.

Body safe fragrances for use in perfume applications are listed as '**category 4**' on an IFRA statement. Always be sure to check the suitability when using as a perfume.

For example:

If the IFRA statement says 5%, then you cannot use it for Perfume, because your formula requires 15%.

If the IFRA statement says 20%, then you can use it for Perfume, because your formula requires 15%.

Standard Candle Fragrances

You can use most standard candle fragrances with this Perfume Base for the application of '**premium grade**' Room Spray. Read this [articled](#) for more information <https://glasswareimports.com.au/room-spray-perfume/>
